		Project co-funded by the European Commission within the Seventh Framework Programme (FP7-ICT-2013-10)) ICT-2013.1.2: Software Engineering, Services and Cloud Computing Grant Agreement No.: 611337 www.heads-project.eu
Title: <h2 style="text-align: center;">D5.2: Infrastructure and Development Guidelines</h2>		
Editor(s): Walter Waterfeld Brice Morin Olivier Barais		Approved by: Trine Seeberg Classification: Confidential
Abstract / Executive summary: <p>The HEADS project, which is made up of six partners, requires an effective set of tools and infrastructures in order to work collaboratively on the project goals. In this deliverable we present the chosen infrastructures especially for developing the components of the HEADS project. For these infrastructures a methodology based on simple easy to use guidelines is established. The document describes this with the focus of the HEADS Integrated Development Environment (IDE) as the main software development artefact of HEADS.</p> <p>The most important development infrastructures consist of a source code repository, a continuously integration and build process and development IDE. The source code repository is closely integrated with an issue tracking and a simple milestone based project tracking system. The continuous integration infrastructure is especially suited for Java development together with the Eclipse IDE.</p> <p>They are based on proven infrastructures already used by several of the HEADS partner in previous projects. In this deliverable there is a specifically adapted version defined for the HEADS project.</p>
